A Guide to Efficient Business Communications Convergent Solutions

Achieving High Security & Availability

Before You Consider Converging!

Get your current house in order

- > Do you know your total telecom spend?
- > Is your company's telecom solution efficient?
- > Do you have your telecom on a single invoice?
- > Have you consolidated your telecom providers?
- > Are you maximizing your current infrastructure?
- > What are your Voice, Data & Internet traffic volumes?

Secure your Information Systems

- > Assess the risks in each relevant area.
- > Design & implement a Safeguards program.
- > Select appropriate telecom service providers.
- > Engineer your infrastructure for high availability.
- > Don't forget employee management and training.
- > Monitor and manage security during system failures.

Five Nines Networks designs custom Telecommunications solutions with a focus on 99.999% availability networks.

We utilize best of breed telecommunications, software and hardware vendors to achieve highly secure, converged wide area and broadband networks.

WE:

- >> Identify, audit and certify your network.
- >> Define the benefits of convergence to you.
- >> Clarify budgetary aspects and mitigate risks.
- >> Implement convergence in wide area networks.
- >> Create predictable pricing for adding applications.

Five Nines Networks Services:

Telecom Infrastructure Assessment

Five Nines Networks will perform a comprehensive review of the entire telecom network that details your current telecom spend, the basis for identifying potential cost savings.

Bill & Account Management Service

Five Nines Networks will evaluate, consolidate and manage telecom accounts & invoices.

Carrier Transition Service

Five Nines Networks performs the transition for you, surpassing internal management of a complex process of multiple vendors with timely cutovers and minimal business disruption.

Network Design Consulting

Engineering 99.999% Availability Networks is what we do! Five Nines Networks offers solid recommendations that improve your costs and efficiencies. We comprehensively redesign your voice, data, cellular, pager and Internet networks to support new business needs or utilize new technologies.

IP Telephony/Convergence Consulting

VoIP and Convergence means many things to many people, but one thing everybody can agree on is that it presents opportunities and challenges that must be addressed. If you are like many of our clients, you may be challenged with determining if VoIP is right for your organization – and if so, is now a good time to position or implement a solution?

Network Safeguarding and Certification

Adequately securing information makes good business sense, and for some industries it is the law. Show your customers that you care about the security of their personal information. If your Information Systems require compliance to HIPAA or The GLB Act and FTC Safeguard Rules, then contact Five Nines Networks today for a comprehensive security audit and compliance certification.
